

Task One

pseudobabble

October 23, 2022

Contents

1	Usage	1
2	Approach	1
	Spent too long on this - got too interested in exploring the solution, and making it tidy.	

1 Usage

```
cd task_one
python3.8 -m venv venv
source venv/bin/activate
pip install -r requirements.txt
pytest -vv test_password_evaluator.py
python -m password_evaluator [PASSWORD] [PATH]
```

2 Approach

1. Test for each condition
2. Apply operation to rectify each failed condition

It still isn't quite right - I haven't found the right structure of operations, and changing the order of operations changes the required number of operations. I haven't found a way to guarantee a minimum number of steps and correctness.
